

## 1107

**Globe valve**  
**Bellow sealed**  
**Straight seat type**  
**PN 63-100 DN15-100**

**Design**  
 Acc. to DIN 3356

**Top part**  
 Non-rising handwheel  
 Rising Stem

**Stem sealing**  
 Bellow with additional  
 stuffing box

**Obturator**  
 Disk

**Body seat**  
 Integral seat

**Valve ends**  
 Flanges acc. to  
 EN 1092-1 (DIN 2501  
 Part 1)

**Requirements and tests**  
 Acc. to DIN 3356 Part 1  
 BA = 1,3 x PN

**Marking**  
 Nominal size DN  
 Nominal pressure PN  
 Body material  
 Manufacturer brand  
 Flow direction arrow

For temperatures > +400°C: Bolting material 1.7709 and bonnet made of stainless steel

**Modifications**

Position indicator  
Throttle plug / Regulating disk  
Relief plug / By-pass disk  
Bonnet made of stainless steel  
Soft seated disk  
Conical disk

Relief plug / By-pass disk

**Installation**

Piping is to be in such a manner that injurious thrust and bending forces are kept away from the valve casings. Globe valves are usually installed thus allowing the liquid to enter below the plug and to leave above it. Globe valves can also be installed in pipelines with changing flow directions up to the under mentioned differential pressures between the working pressure before the closing plug and the back pressure behind it. As soon as these differential pressures will be exceeded, relief plugs have to be provided for. These have to be installed in such a way that the pressure to be sealed has to be above the plug.

Nominal size DN	80	100
$\Delta p$ [bar]	70	44

The relief plug has the function of a by-pass and can only serve its purpose when after opening a back pressure is built up so that the differential pressure becomes smaller than the figures in the above table. If this is not possible, special designs are necessary. In this case we need the exact working conditions. When turning the handwheel it is not allowed to use additional levers.
